MIKHAIL MURAVEV

SOC Engineer | Incident Response & DFIR | Detection Engineering | Network Security

Rostov-on-Don, Russia · jadiknightrevan@gmail.com · +7 963 286-72-22 · linkedin.com/in/revanhol

Open to relocation — Singapore, USA, Australia, Japan, Philippines, Cyprus, South Korea, Taiwan, China · Visa sponsorship required

PROFESSIONAL SUMMARY

SOC Engineer with 1.5+ years of progressive experience (L1 → L2 → Senior Engineer) in security operations, incident response, digital forensics, and detection engineering. Strong background in network traffic analysis, SIEM operations, endpoint forensics, malware analysis, and security automation. Led deployment of enterprise malware sandbox infrastructure and network flow analytics platform. Seeking SOC, DFIR, Detection Engineering, or Security Operations roles; open to relocation and visa sponsorship.

CORE COMPETENCIES

Security Operations (SOC L1/L2) · Incident Response · DFIR · Threat Hunting · SIEM Engineering & Detection Rules · Network Traffic Analysis · Malware Analysis & Sandbox Deployment · Endpoint Security & EDR · Vulnerability Assessment · Security Automation (Python/Bash) · WAF Management · Identity & Access (AD/LDAP) · Container Security · Security Reporting

PROFESSIONAL EXPERIENCE

Senior Security Engineer (SOC L2 → Senior) — NIISVA (FGANU NIISVA), Rostov-on-Don, Russia

February 2025 – Present · Progressed: SOC L1 (Feb–Jul 2025) → SOC L2 (Aug 2025–Sep 2026) → Senior (Oct 2026–Present)

- Triaged and resolved security alerts across enterprise infrastructure as SOC L1/L2 analyst, prioritizing by severity and business impact.
- Authored and tuned detection/correlation rules in enterprise SIEM platforms, improving alert quality and reducing false positives.
- Designed dashboards, reports, and operational metrics in SIEM, ELK, and Grafana for security monitoring and management visibility.
- Led forensic investigations of compromised Windows/Unix endpoints and servers — evidence collection, incident scoping, timeline building, coordinated response.
- Performed containment, eradication, and recovery, including restoration of compromised RDS farms and legacy servers for forensic analysis.
- Authored post-incident reports and documented findings for stakeholders.
- Owned enterprise network flow analytics platform (NetFlow-based traffic analysis and anomaly detection) for proactive identification of suspicious behavior.
- Deployed and maintained distributed honeypot sensors across multiple network segments to collect real-world indicators of compromise.
- Configured IDS/IPS detection using TLS fingerprinting (JA4/JA4S) on mirrored internal traffic.
- Deployed and productionized malware sandbox infrastructure (multiple guest VMs, network simulation, analysis tooling) for dynamic malware analysis and IOC extraction.
- Administered EDR platforms and performed endpoint hardening on owned Linux and Windows servers.
- Monitored and tuned WAF rules, analyzing web attacks and blocking malicious source networks.
- Operated DLP controls for data leakage detection and configured automated sensitive-data discovery.
- Performed secure code review of internal user-provisioning software, identifying critical flaws (hardcoded credentials, command injection, outdated dependencies).
- Automated data pipelines (Elasticsearch-to-ClickHouse migration, scheduled processing, security log parsing, JSON ingestion) with Python and Bash.
- Integrated security platform APIs to generate custom reports and automate recurring tasks.
- Standardized SOC operations with triage playbooks and workflows for Tier 1 analysts.

TECHNICAL SKILLS

Security Operations: SIEM engineering, detection rules, alert triage, log correlation, dashboards/reports, SOC L1/L2
IR & DFIR: Endpoint/network forensics, artifact collection, timeline analysis, containment/eradication/recovery, post-incident reporting
Threat Hunting: Network anomaly detection, log-based hunting, honeypots, traffic behavior analysis
Network Security: Firewalls, segmentation, VPN, IDS/IPS, NetFlow/traffic analysis, JA4/JA4S TLS fingerprinting
Endpoint & Malware: EDR administration, hardening, malware sandbox deployment/operation, dynamic analysis, IOC extraction
WAF & Data Protection: WAF rule tuning, DLP operation, automated data discovery, email security, backup/recovery
Identity & Access: Active Directory, LDAP, user/group management, MFA, SSO
Automation: Python, Bash, API integration, data pipelines, JSON parsing, scheduled tasks
Containers: Docker, container-based security tooling
Vulnerability Management: Assessment awareness, CTI-driven notification, secure code review
Compliance: GDPR, PCI DSS, NIST CSF, MITRE ATT&CK (working knowledge)

EDUCATION

Master's Degree in Cybersecurity — Don State Technical University (DSTU), Rostov-on-Don, Russia — January 2025
Specialization: Network Security, Cryptography, and Cyber Threat Intelligence

CERTIFICATIONS / TRAINING

Computer Incident Response Training — Codeby

LANGUAGES

Russian — Native · English — B2 (Professional working proficiency)
